NEWS AROUND TOWN

By Mrs. Calvin Robinson

Around Town column . . . . . .

I liked this one:

"Mother, oh Mother," sobbed the young bride as she rushed back to her old home.

"What's the matter, child?" asked the mother.

"Oh, Erich is so absent minded. As soon as he's finished breakfast he puts 60 cents on the table. And when I help him with his coat he gives me a tip . . ."

Mother was comforting, "He'll get out of those habits. That's just his bachelor behavior."

"Yes, but. . . ." and daughter began to howl again, "when he goes out the door he kisses me, too!"

—Revue, Munich.

If you are puzzled as to what to give someone for a Christmas gift, let me suggest a subscription to The Times-Virginian. I will be glad to send a Christmas card with each gift subscription, but send it in to us early! —Mother Brightleaf.

Congratualtions to Mr. and Mrs. Leon Paulette upon the arrival of a son, Dean, born at the Virginia Baptist Hospital, Monday, Dec. 3.

All W. M. U. members and church members interested in contributing cakes or cookies to the Children's Home at Salem, are asked to please bring them in Sunday, Dec. 16, to the Primary Department of Liberty Baptist Church.

A Marionette Show, "Night Before Christmas," will be presented by Mrs. L. C. McKenzie on Thursday, Dec. 13, in the Sunday School room of the local Appomattox Court House Presbyterian Church. There will be three shows: 3:30, 7, and 8 P. M. A silver offering will be taken.

Mr. Nathaniel S. Topping celebrated his 90th birthday Monday, in the home of his niece, Mrs. Ernest Rogers. We wish for this fine gentleman the best of health and many more birthday anniversaries.

Dickey O'Brien is a patient in the Virginia Baptist Hospital, where he will undergo a tonsillectomy on Friday morning.

Congratulations to the boys and girls basketball teams of A. H. S., who roled to victory over Nelson County H. S. in opening games on Tuesday night at the local gym.

Be sure to attend the Grand Opening of Grinels Motor Company on Tuesday, Dec. 11, at their new building on Route 460, just west of Appomattox. There will be pretty rose buds for the first 150 ladies to register. Also refreshments, favors and door prizes. The Grinels invitation will be found on Page 9 of this issue. Also, Happy Birthday to Mr. John S. Grinels, whose birthday is Dec. 10.

The Flower Shop, operated by Mrs. Wm. Burke, and Mrs. L. A. Young, will hold their traditional "Open House" Thursday, Dec. 13, from 2 to 5 and 7 to 10 P. M. This will be the tenth year that friends and customers have had the pleasure and opportunity of visiting the Flower Shop prior to Christmas, to begin discussing plans and decorations for the Christmas season. Mrs. Burke and Mrs. Young are gracious hostesses to increasing numbers each year and are unsparing in their efforts to help everyone with their Christmas decorations. Their shop is "a thing of Beauty" to look upon, overflowing with Christmas Spirit.

This morning's mail brought a letter from Col. George H. Collins, the Joe Sweeney biographer. Col. Collins is enthusiastic about plans for a Sweeney Memorial at Appomattox, and has his book on the banjo inventor about ready for the press. We regret to report that the Colonel and his lady will not be able to visit Virginia this year.

About The Home

By Frances Dell

Now is a good time to make a notebook of garden suggestions that will help you become a more successful gardener—come spring and summer. I will pass on to you a few facts that have helped me.

You will find there will be more flowers on your asters, bottonia and chrysanthemums if you pinch off the tip growth when each plant gets six inches tall. Nipping the tips causes single stems to branch. Repeat the operation again when the new shoots have grown another six inches.

Climbing roses trained horizontally along a low fence bloom more freely than if they are grown upright. Fasten new canes with soft cord or with regular plant ties bending them from the base. Bloom buds will rise from almost every leaf joint.

Transplant your iris to sunny spots when necessary. Pry up the clumps growing in shade and break them into sections. If they are floppy, trim the tops back to seven inches. Reset in soil mixed with fertilizer and peatmoss or compost so the root mass is covered with an inch of soil.

Keep phlox blooming in colors you desire by cutting off flower heads before seeds drop, and by removing "volunteer" seedlings. Wet the soil and grasp the stems of poor-colored plants and twist to pull out.

During the summer, try watering your plants once a week thoroughly—6-inch deep. The best way to do this without washing is to tie a canvas glove over the end of your hose—place it ten inches from the base of your plants and let the water run slowly.

Protect your flowers with papers while spraying the lawn with 2,4-D. The merest whiff of 2,4-D vapor will twist and distort the elaves and stems of zinnias, roses and many other plants.

Give a subscription to the home county newspaper for Christmas!

WISE POULTRYMAN KEEPS UP WITH THE TIMES

The wise poultryman keeps up with the times, says Denver Bragg, associate poultry husbandman at V. P. I.

He notes a recent report from the Florida Agricultural Experiment Station. Research workers there supplemented the poultry ration with DL Methionine. They got marked reduction in mortality from cannibalism and pick-outs. Bragg thinks that a supplemental feed highly fortified with Methionine, which the poultryman could use as a part of the ration for cannibalistic flocks, seems to be needed.

In using roll-a-way typle nests, some poultrymen find large numbers of eggs on the floor when the birds first come into production. One Experiment Sation used a wooden nest egg fastened with a screw eye to the bottom of the nest. As a result, floor eggs the first month of production were only 2.7 per cent. Poultrymen who use this type of nest might want to try the nest-egg idea.

Scientists at the Univeristy of Georgia studied the effect of washing on the hatchability of eggs held for one week before incubation. They found that eggs washed properly apparently will hatch as well as unwashed eggs.

Reports from other research show that .0125 per cent nicarboxin in mash fed to laying hens depressed egg size and caused severely mottled yolks. However, the continuous feeding of .0125 per cent or less Nicarbozin, a coccidiosis preventative, from day-old to maturity has no effect on sexual maturity, egg production, or egg weight. It seems this material is all right to feed to chicks and growing stock, but should be discontinued before the birds go into production.

NEW CHEMICAL FOR TOBACCO WEED CONTROL

Plenty of uniform, healthy plants at transplanting time are essential for successful tobacco production. Weed control is a problem that takes time or few plants will be available to the grower.

Following on new chemicals that effectively control weeds and certain seed-borne disease organisms.

Allyl Alcohol (A-A) —Allyl alcohol is a liquid, soluble in water. It is an effective contact herbicide for the control of weed and grass seed in the plant bed; however, it does not control clovers effectively. The stand and growth of tobacco plants after this treatment has been good. Allyl alcohol does not give adequate nemadoic control when used alone. At least 14 days should elapse between application of the material and seeding.

Allyl Alcohol and Ethylene Dibromide (A-A:EDB) — Trade name: Bedrench. This chemical is a mixture of allyl alcohol plus the soil fumigant, ethylene dibromide. The liquid mixture forms an emulsion with water. Apply at least 14 days before seeding.

Allyl Alcohol and Dichloropropane (A-A:DD): Trade name: Basco Bed Drench and Vapam (Plant Bed Drench). This is a mixture of the weed killer, nematocide. It is used as a dilution in water. Twelve to 15 days must elapse between treatment and seeding to prevent injury. Sodium Methyl Dithiocarbamate: (Trade name: Vapam). This is a water soluble chemical that is a temporary soil sterilant. It kills weeds and germinating seeds as well as soil fungi and insects. It requires 14 to 21 days for the effects of this chemical to dissipate from the soil.

ELEMENTARY SCHOOL CAFETERIA MENU

Monday, Dec. 10.- Tuna fish salad with crackers, candied sweet potatoes, apple sauce, hot gingerbread, 1-2 pt. milk.

Tues., Dec. 11.- Hamburger on bun, one slice cheese, turnips, whipped potatoes, jello, 1/4 pt. milk.

Wed., Dec. 12.- Hot dog on bun with dressing, cole slaw, baked beans, ice cream, 1/2 pt. milk.

Thurs., Dec. 13.- Spaghetti with meat balls, string beans, buttered beets, hot biscuits, chocolate pudding, 1-2 pt. milk.

Friday, Dec. 14.- Vegetable soup with crackers, 1/2 ham and cheese sandwich, sliced peaches, Devil's food cake, 1-2 pt. milk.

Job total sets October record for nation.

David Wright, Dec. 28.
Mrs. A. W. Jones, Dec. 25.
Miss Gertrude Ranson, Dec. 25.

Society

CHANDLER - FICHTNER

The marriage of Mrs. Ingeborg E. Fichtner, daughter of Mr. and Mrs. Otto Felkle, of Weisbaden, Germany, to Homer Vincent Chandler, son of Mrs. Emeline B. Chandler, of Appomattox, and Homer Moses Chandler, of Dumfries, Va., took place Sunday, December 2, at 2:30 P. M., at the home of the officiating minister, Dr. Carl A. Collins.

Evergreens and white candles provided a background for the wedding.

Music was provided by Mrs. John H. Chandler, and Miss Nancy Chandler.

The reception afterwards was given in the home of Mrs. Emeline Chandler.

After a short wedding trip the couple will make their home in Falls Church.

Out of town guests attending the wedding were: Mrs. Peter J. Contos and children, Marie, Jimmy and Kathy, of Fairfax; Mr. and Mrs. J. B. Maddox, Mrs. Myrtle Morton, of Arlington; Mr. J. B. Maddox, Jr., Wayne Largen, Layman White, Henry King, of Falls Church; Mrs. Herman Schutt, of Colonial Heights; Mr. and Mrs. Dick Schutt, Mrs. Flora Herring, and Mrs. Rommie Jordan, of Crewe; Mr. and Mrs. John H. Chandler, of South Boston, and Mr. and Mrs. Wilson Morgan, of Burkeville.

REDUCTION OF FEED COSTS IMPORTANT TO FARMER

How to reduce feed costs is one of the questions poultry producers most important to the livestock, dairy and

One of the answers lies in the proper production and preparation of feeds on the farm.

To prepare feed on the farm, the producer needs suitable grinding, mixing, elevating, and storage facilities. And equipment and storage areas should be set up so they require the least amount of labor and time.

At least one or more mixer-grinder combinations are now on the market which will do a good job of preparing feeds. These units are inexpensive, electrically driven, and will automatically proportion, mix, and grind as many as four ingredients simultaneously without any supervision. They need only a two horsepower electric motor and are equipped with a time switch which will automatically turn the machine off when pre-determined amounts of feed have been ground.

In addition to the hammer-mill mixer combination, the farmer will need to build overhead bins for free flow of the grain to the mill.

A test with one of the mixer-grinder combinations at Alabama Polytechic Institute showed that electrical consumption ranged between 1-10 and 6-10 kwh per 100 pounds of feed, depending on the dial settings and the amount of grinding required for the mixture. Machine capacity varied from 419 to 2,086 pounds per hour, again depending on the dial settings and the mixture.

James Cagney to become a movie director.

TULAREMIA SEASON NOW IN SWING

With the opening of the general hunting season in Virginia on Nov. 18, many hunters will come in contact with the wild rabbit, principal source of the infectious disease, "tularemia."

Dr. Mack I. Shanholtz, State Health Commissioner, notes that the months of November, December and February generally show the largest incidence of reported cases of this disease. Through October of this year, 19 cases have been listed. Last year there were 26 reported cases and in 1954 there were 46.

Hunters were warned by Dr. Shanholtz to take every precaution to avoid contracting tularemia which, though rarely fatal, is troublesome and often painful. "Although many wild animals may be infected with tularemia, the disease occurs most frequently among wild rabbits," he said. Other animals which can be a source of infection are the tree squirrel, woodchuck, quail, skunk, opossum, deer, fox, and even domesticated animals such as the cat or dog.

"Man becomes infected through the handling of infected animals, such as in skinning or dressing, or by the bite of infected flies or ticks," according to the Commissioner. He pointed out that in June and July of this year, there were 10 reported cases of tularemia, most of them attributed to ticks. Tularemia can also be transmitted by eating insufficiently cooked rabbit meat. He also cautioned that freezing the meat does not kill the tularemia bacteria.

The onset of the disease is sudden, with chills, headache, vomiting, aching, weakness, and always fever. The patient usually is prostrated and confined to bed. An ulcer may appear at the sitd of infection with swelling of the lymph glands in nearby parts of the body. In recent years the antibiotics have been used in the treatment of tularemia, reducing the duration of the illness from months to weeks. Although convalescence is usually slow, recovery is followed by permanent immunity.

"Prevention of the disease is mainly a matter of personal precaution by the hunter or anyone handling wild animals," the Commissioner stated. Sportsmen should avoid shooting slow-moving rabbits and should never pick up rabbits that are found dead or can be killed with a club. These rabbits probably have tularemia.

Dr. Shanholtz emphasized that any person who may be handling raw wild rabbits, such as the hunter, trapper, housewife, or cook, should wear rubber golves to give protection against contracting tularemia. Make sure these gloves are leak-proof. Avoid cuts by knives or sharp ends of animal bones while dressing or cooking wild rabbit. Do not touch or rub your eyes with your hand.

He also pointed out that any small white or grayish spots noticed on the liver of a rabbit are probably tularemic abscesses or ulcers. Such a carcass should be be burned and the hands washed thoroughly with soap and water. Antiseptic or disinfectant should be used on all open cuts.

COST OF LIVING HIGH

Reno, Nev.- When six prisoners who broke out of the Washoe County Jail on October 28, captured and held for Federal action at Sacramento, Ca., wrote and asked return of $199 they had left behind in the jail, District Attorney A. D. Jensen immediately filed a small claims damage suit against them for the hole the escaping prisoners cut in the wall. The amount of damage to the jail: $199.

Europeans preparing plan for United States oil aid.

MEAT-TYPE HOG PROFITABLE

Farmers have been hearing a lot these days about the "meat-type" hog. What is it? In simple terms, is a hog that runs more to lean than to fat.

Meat-type hogs can be produced as economically and efficiently as other types of hogs.

More and more breeders are producing streamlined meat-type hogs, and better animals are becoming available to farmers as seedstock. The movement toward the meat-type hog has the force of a trend. An increasing number of buyers are grading. Some packers are buying animals under closer grading than heretofore; and some retailers are equating price with leanness.

Research on production traits and carcass desirability indicates that the dimensions of a meat-type hog—at a market weight of 225 pounds—should be about 40 to 42 inches in length from the root of the tail to a point between the ears, 11 or 12 inches wide, and 14 or 15 inches deep back of the shoulders. Backfat thickness should not be more than 1¼ inches. The cold carcass should dress out 50 per cent or more of the preferred lean cuts, such as hams, loins, picnic shoulders, and shoulder butts.

It is reported that only 15 to 17 per cent of the 70 to 80,000,000 hogs going to market are meat-type hogs.

Every breed has its leaner types as well as those that run to fat. A farmer with good foundation stock can start with what he has and work toward the production of meat-type hogs by selecting his sows for meat-type and using the best meat-type boars obtainable. Good feeding and good management are also essential. Research has shown that no breed of hogs has a monoply on meat-type animals. It should be possible to improve each of the breeds for leaner carcasses.

The Navy icebreaker Glacier has reported sighting in Antarctica an iceberg more than twice the size of Connecticut, and the largest on record.

Suggestion: Give a subscription to the home county newspaper, The Times-Virginian, for Christmas!
